Profile

Applied Informatics graduate (IIAMAK, 2026) in Thessaloniki, Greece with strong focus on Machine Learning, Data Science, and Python backend development. Experienced in classical ML — supervised and unsupervised learning, model selection, and hyperparameter optimisation — as well as deep learning pipelines. Experienced with SQL and relational databases, and has worked with frontend technologies including React and Next.js. Seeking MSc in Machine Learning / Artificial Intelligence.

Education

University of Macedonia 2020 – 2026
B.Sc. Applied Informatics

University of Michigan 2019
English Proficiency — C2

KPG (ΚΠγ) 2020
German — B2

Skills

Backend:

Python, FastAPI, SQL (PostgreSQL), REST APIs

ML / Data Science:

Pandas, NumPy, Scikit-learn, PyTorch, Optuna, Matplotlib, Plotly

Web:

React, Next.js, TypeScript, Tailwind, HTML/CSS

Finance / Quant:

TA-Lib, finta, yfinance

Tools & Env:

Git, GitHub, Jupyter, VS Code, Linux, ffmpeg, ComfyUI

Volunteering

Fosscom 2025

University Tech Event, Thessaloniki

University Activities

General university events & committees

Open Source

Repos, code contributions & forums

Interests

- Machine Learning / Data Science
- Backend / Framework-Library Development
- Databases / Data Manipulation & Analysis
- Quantitative Finance
- Deep Learning
- Open Source / Linux / Blockchain

Experience

Technical Support Analyst 2025 – 2026
Cosmote · Thessaloniki, Greece

- Provided technical expertise and domain knowledge for system diagnostics.

Freelance — Data Science / ML / Web Dev 2023 – 2026
Thessaloniki, Greece

- Trained CNN models (Deepfake & Breast Cancer detection).
- Delivered many paid academic assignments.

Data Analysis / Website Development 2025
Kemanetzidis A.E. · Remote

- Data analysis and reporting for commercial business operations.
- Full-stack website development for business operations and client-facing services.

Projects

Hyper-TA

Technical Analysis Signal Generator & Hyperparameter Optimization Framework/Library.

Bitcoin Mathematical Modeling

Price prediction using Machine Learning & Mathematical Models.

Neural Networks for Deepfake Detection

Identifying manipulated facial images using CNNs & Transfer Learning.

Decentralized AI — University Thesis

Bittensor (τ) thesis for university: The Evolution of Intelligence / Capitalism. Simulating decentralized AI subnet mining and validator scoring offline.

Fuel Station Website

Fully responsive Full-stack Website for business operations.

Finpipe

Python API library that collects and aggregates market data from multiple fragmented providers into a single unified interface.

Unipmx

Unified prediction markets Python API library providing a single interface across Polymarket, Kalshi, Limitless and other venues.

YTmation

YouTube automation framework for repetitive video tasks (cut, edit, caption). AI-agent-first — plug in your own models to generate videos and animations on the fly.
